Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

Office Action Summary

Application No.

10/562,552

Applicant(s)

NAGAHAMA ET AL.

Examiner

Geoffrey T. Evans

Art Unit

2852

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 October 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-8 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-8 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsuda (2003-354114), in view of Iguchi (08-339115), further in view of Isomura, et al. (6,963,713).

Regarding claim 1, and claims 2-8 depending therefrom, Tsuda discloses a developer container comprising: a cylindrical container main body (1, see [0022]) for containing a developer for use in image formation, the developer container being detachably mounted on an image forming apparatus (see [0033]), the container main body being rotated about an axis thereof (see [0003]) by driving means provided in the image forming apparatus to supply the developer to the image forming apparatus, the container main body having: a discharge hole (2a; see [0022]), for discharging the developer, and conveying means (the conveying portions; see [0022]) in an inner circumferential portion of the container main body, for conveying the developer in the axial direction when the container main body is rotated about the axis (see [0022]), the conveying means having a plurality of conveying portions (multiple grooves; see figure 1, paragraph [0022]) extending in an extending direction from one end portion to the other end portion in the axial direction as it is directed to a downstream side in a rotation direction (see [0023]), the conveying portions being formed at intervals in a

circumferential direction thereof and the axial direction, of which adjacent two conveying portions in the axial direction being arranged in such a manner that an end portion on a downstream side in the rotation direction of one conveying portion and an end portion on an upstream side in the rotation direction of the other conveying portion adjoin each other in the axial direction (see figure 1).

Tsuda does not disclose the discharge hole being substantially on the middle portion of the container main body in an axial direction.

Iguchi discloses a discharge hole being substantially on the middle portion of the container main body in an axial direction (see [0014])

It would have been obvious to one of ordinary skill in this art at the time the invention was made, to modify the developer container of Tsuda by putting the discharge hole being substantially on the middle portion of the container main body in an axial direction, since the developer would not have to be conveyed as far, and developer container volume could be saved since smaller conveying grooves would be necessary, as noted in Iguchi (see [0017]).

Tsuda does not disclose each conveying portion being disconnected from the others.

Isomura teaches conveying portions (2d) such that each is disconnected from the others (see figures 3-5; and column 8, lines 12-17).

It would have been obvious to one of ordinary skill in this art at the time the invention was made, to modify the invention of Tsuda such that each conveying portion

is disconnected from the others, since providing a gap between adjacent conveying portions enables one to efficiently loosen or fluff the developer in the container, as noted by Isomura et al. (see column 8, lines 36-40).

Regarding claim 2, Tsuda discloses the developer container of claim 1, wherein the container main body is provided with a discharge hole for discharging the developer, and the conveying means conveys the developer in the axial direction of the container main body toward the discharge hole while oscillating the developer by rotating the container main body. See [0024].

Regarding claim 3, Tsuda discloses the developer container of claim 1 wherein the conveying portions are formed so as to meander in a substantially S-shape. See figure 1.

Regarding claim 4, and claims 5-7 depending therefrom, Tsuda discloses the developer container of claim 1, wherein the container main body is provided with a discharge hole for discharging the developer, and the conveying portions are formed so that the conveying amount of the developer by a conveying portion formed in a close portion to the discharge hole becomes larger than the conveying amount of the developer by a conveying portion formed in a distant portion from the discharge hole. See [0022] and [0027].

Regarding claim 5, Tsuda discloses the developer container of claim 4, wherein the conveying portions are formed so that the conveying portions formed in a close portion to the discharge hole proceed in the axial direction in the longer distance as

proceeding in the circumferential direction in comparison with the conveying portion formed in the distant portion from the discharge hole. See [0027].

Regarding claim 6, Tsuda discloses the developer container of claim 4, wherein the conveying portions are formed so that the conveying portion formed in the close portion to the discharge hole have a larger size in an extending direction in comparison with the conveying portion formed in the distant portion from the discharge hole. See [0027].

Regarding claim 7, Tsuda discloses the developer container of claim 4, wherein the conveying portions are formed so as to protrude inward in a radial direction, and the conveying portion formed in the close portion to the discharge hole is formed so as to have a larger protruding amount inward (6) in the radial direction in comparison with the conveying portion formed in the distant portion from the discharge hole. See [0027].

Regarding claim 8, Tsuda discloses an image forming apparatus in which the developer container of claim 1 is detachably mounted. See [0033].

Response to Arguments

Applicant's arguments filed 10/9/2007 have been fully considered but they are not persuasive.

Regarding Applicant's arguments in the last paragraph on page 6 of the response, the structure of Tsuda can be interpreted as providing conveying portions at intervals, as conceded by Applicant in the 1st full paragraph on page 7 of the response. Also note that the previous recitation of claim 1 did not require the adjacent conveying portions to be disconnected.

Regarding Applicant's arguments in the 2nd full paragraph on page 8 of the response, Examiner respectfully submits that the previously stated motivation for combining Tsuda with Iguchi establishes obviousness. While the proposed modification may not take full advantage of Tsuda's particular optimization of the groove geometries, it would not prevent those grooves from performing their function. The principle of operation of Tsuda's grooves would remain the same.

Otherwise, Examiner concedes that the current amendment to claim 1 overcomes the prior rejection and necessitates the usage of the new reference.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

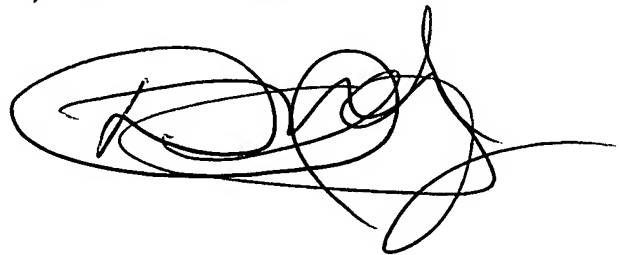

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Geoffrey T. Evans whose telephone number is (571) 272 2369. The examiner can normally be reached on 9 AM - 5 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Gray can be reached on (571) 272 2119. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
